A PCA plot showing the distribution of data points along the first two principal components, PC1 (horizontal axis) and PC2 (vertical axis). The plot displays three distinct clusters of data points, each highlighted by a colored box (blue, green, and red) and a corresponding p-value bracket indicating statistical significance ($p < 0.01$).

- The **Blue Cluster** is located in the upper left quadrant, centered around PC1 ≈ -50 and PC2 ≈ 100.
- The **Green Cluster** is located in the center, centered around PC1 ≈ 0 and PC2 ≈ 0.
- The **Red Cluster** is located in the lower right quadrant, centered around PC1 ≈ 50 and PC2 ≈ -50.

The p-value brackets indicate that the separation between the clusters is statistically significant ($p < 0.01$).
